Here is the breakdown of what I will feature on my portfolio page.

For id purposes, I will include my name, email address, and city of residence.

Below is my revised personal statement:

> My name is Nathan Hodge and I live in Tacoma, WA. I am a front-end web developer with a background in audio engineering. I specialize in building Wordpress pages and am well-versed in HTML, CSS, Javascript and working with Grunt and Angular. My goal is to find a smart team to learn from and build fun things with. I also love independent music and cinema and would love to integrate that passion into my work.

I will include links to my LinkedIn and Twitter accounts.

My concept is to use big rectangular divisions with simple backgrounds and colors to create an elegant experience for visitors. These divs will be the same size and stack on top of each other throughout the page. The exception will be the project section which I will split into thirds. So each row will three projects listed on it, six in total.   I will start with a nav bar on top which includes a link to contact info and LinkedIn and Twitter accounts. Then I will have my personal statement below that. Then I will have a short summary of the projects I am going to spotlight. Below that screenshots and links to the projects. If I can swing it, instead of screenshots being visible right away, I may have the screenshots display upon hovering. In their place I will have simple logos that look elegant and match the simplicity of the page.

My approach for the page is to use great CSS and design scheme to build something pretty. I'd like to use some JS in there as stated to get the screenshots displaying upon mouse hovering. I want to make sure the site is responsive and accessible. I plan on using Angular and Grunt to build the site and a Bootstrap framework to both highlight what I have learned and also get extra practice in.

I am going to spotlight these six projects:

- Capstone
- WeatherApp
- Nobi Artist Page
- Razor Tongue Podcast page
- Zen Garden
- Fortune Cookie Generator

Project Tasks

- Set up Angular, Grunt, and Bootstrap framework.
- Build HTML file. Set up nav-bar and divisions. Worry about text for project summary later.
- Test and work in responsiveness throughout remainder.
- Decide on color and font scheme.
- Build CSS based on those schemes.
- Design and place any backgrounds I might use for div backgrounds.
- Work on JS to display screenshots.
- If workable, design logos for each project.
- Either way, place project links on page.
- Write project summary and insert into page.
- Add footer.
- Test and fix for accessibility as needed.
- Edit and rework as needed.
- Submit when finished.
